Why Decmore Panels

1. In the decorative panels industry most of panels are introduced in the market as wall panels. Decmore panels are designed & developed as art panels with high finish so that a designer can easily apply the panels as on walls, as well as in furnitures also to facilitate a concept designing.
2. Most of the panels available in the market are painted and lacquered or a plastic material. Decmore panels are developed with smart eco friendly material through multiprocess worked according to the design and concept of panels.
3. Decmore panels thickness is 4mm equivalent to veneers of a good company, so that a interior decorator can easily combine panels with veneers and if a interior designer play with laminate of 1 mm than 3 mm MDF could be put with laminate.

Application/ installation Guidelines

Adhesive

Apply a generous even coat of adhesive to the product, immediately wipe off excess glue with a soft damp cloth, and dry with clean soft cloth afterwards to avoid adhesive from getting in front of the product.

Being extra careful to avoid damages on sheet's face surface, apply the decorative panel after polish and finish work has completed. Please apply paper tape on side by side to fix the sheet perfectly.

Cutting & Trimming

To avoid damage, don't use hand saw. Sheet surface must be face-up when cutting, to avoid chipping, trim with cutting machine (Circular saw min, 6000rpm).

Cleaning and Care

Wipe the area using a soft cloth.

Nailing & Drilling

For fixation panels avoid nailing and if it is necessary be careful to nail in the right place without damaging design.

Seam

If gaps occur at the joints, use approximate colour fillet. Immediately remove any excess filler. Wipe off but avoid scratching the surface.

*Being a processed and handmade product , the colour may vary slightly.
